

14 BRONCO

HIGH ASPECT KITE

SIZE RANGE:
4 > 6 > 8 > 10 > 12 >
14 > 16 > 18 > 21

Spanwise panel construction avoids the performance hindering 'chicken ribbing' effect associated with our competitor's kites. The efficiency gained with spanwise construction is directly translated to maximum possible hang time.

Our Constant Conical Curve creates a precise arc for increased performance and better load dissipation. Resulting in a huge wind range.

NOTE THE CONSTANT SMOOTH SHAPE

Not one stitch but three!
Are you noticing a theme...?

Added Strength & durability.

x3 STITCHES

FINE TUNING

Multiple front and rear attachment points for precise tuning. Velcro pockets to store unused pigtauls.

Dacron strips are added to seams for additional reinforcement. Thus again, added strength & durability.

DACRON STRIPS

REINFORCED SEAMS

3 Dacron Load Strips take the brunt of the load preventing tears, especially in hard crashes which have traditionally split kites.

Radial reinforcements at all load points.

DACRON FRAME

n3 TECH.
